REDCap Training

REDCap User Training Guide

Getting Started with REDCap

REDCap (Research Electronic Data Capture) is a secure, user-friendly web-based application designed for building and managing online databases and surveys. No programming experience is needed, and it's widely used for medical research but flexible enough for nearly any data collection purpose.

You can access REDCap from any device with an internet connection, and it even has a mobile app for offline data collection. Projects in REDCap are essentially webpages that include data entry forms and/or surveys. These can be customized extensively to fit your workflow, whether you're gathering one-time data or running a complex, longitudinal study with multiple time points.

Helpful Training Videos

To familiarize yourself with REDCap, we recommend watching the following two introductory videos. These videos can be watched on 1.5x speed if you prefer, or you can read the PDF transcript attached below the video window:

1. **Brief General Overview (7 minutes)**

[Watch here](#)

A quick introduction to what REDCap is, how it works, and the types of projects it supports. A lot of the functionality described will not be relevant to you but is good to be aware of.

2. **Overview of Basic Data Entry (19 minutes)**

[Watch here](#)

This video demonstrates how to enter data, manage surveys, and navigate the user interface.

You can find more training videos here:
